- Over 2+ years of remote work experience and experience using **version control systems** and professional office software for management.
- Strong familiarity with Backend Development using **NEST**, **PHP**, **MySQL**, **REST APIs**, and **Node**.

PROJECTS

E-learning - DRA
I participated in the implementation of the e-learning platform for Davchel International Schools. This is robust web application with courses that allow learners to get courses of their interest and learn at their own pace. I also created a course here and contributed up to 90% of the initial learning resources – www.dra.education

Employee Management System
To boost HR efficiency with management, I Developed an employee management system using Angular framework to aid sorting the management of staff working with an organization, remotely, or on site (in progress) - https://github.com/mgt-sys

CSV File Reader - PHP
In this project, two (2) CSV files are provided. The first contains specific information of 251 countries and the second contains details of 161 currencies around the globe. All details are read into a MySQL database; creating 2 separate tables for each CSV file, and then rendered on the view (with pagination). https://github.com/agpay-project

Wish App
Used PHP to create a full-stack web app to allow colleagues to send wishes to other colleagues who work in the same organization with them. – https://github.com/Ernesto-da-great/wish-app/

EXTRACURRICULAR ACTIVITIES

J.P Morgan Chase & Co. Virtual Experience Program Participant (Software Engineering).
04/2022 – 08/2022
Participated in the open access J.P Morgan Virtual Experience program with Forage
Tasks completed include:
- Interface with a stock price data feed.
- Use J.P Morgan Chase frameworks and tools.
- Display visual data for traders.

EDUCATION

Bachelor of Science in Computer Science – BSc.

Ahmadu Bello University, Zaria.
